

How to Make Array Cards

What You Will Need

- Copies of Array Cards, Sheets 1–6
- A plastic bag to keep the cards in
- Scissors, pencil

What to Do

1. Cut out each array on the Array Card sheets. Cut them very carefully. Follow the outlines of each array as exactly as you can.
2. Each card has two sides. On the array side of the card, write the **dimensions** of the array.

Example:

	2	×	5	
	5	×	2	

3. On the other side (the blank side), write the total number of squares in the array.

Example:

2	10	J.P.
---	----	------

Also write one of the dimensions of the array, very lightly, on the card. Use pencil so you can erase later.

4. Write your initials on each card. Put them in the plastic bag. Keep your cards together at all times!
